

XPress Association Database

... the net-worked database

Relative Performance

The Econnectix XPress Association Database is built for applications that benefit from high transaction rates, high-availability, and the choice of the fastest persistent storage available. No other database technology has competitive performance. Built on top of XPress, solutions can manage network applications at wire-speed, getting more performance out of existing hardware and lower the bottom-line in new purchases, while providing unparalleled network-wide data management capabilities.
